NSLS CONFINED SPACES (September 25, 1995)

Bld./Name	Name of Space	Quan.	Neat* Class	Activity** in Space	Freq.** Of Entry	Activity* Class	Potential Entry Hazards
Outside 725	Helium gas tanks	2	2A	None	Never	2A	Horizontal storage tanks above ground

*All classifications (for neat and activity classes) are for entry when all energy sources in the space have been properly locked and tagged out.

**These tanks are not entered in a routine fashion. Should the need arise to enter the tanks, a procedure would be developed at that time with the Safety and Health Services Division.

This confined space survey was conducted and determinations made by Tony Millet & Gary Adams (SHS); Andrew Ackerman and Tom Dickinson (NSLS).

Note: entry into these tanks is currently prevented by bolted end flanges which are labeled as follows: "Entry is subject to OH&S Guide No. 2.2.4 Confined Space. (Contact your S&EP Representative)."
